Sir,

Subject: Courses Code Conflict/Miss-matching exists in the IIUI CS Course Codes hierarchy/scheme

Reference to the Terminal Examination Date Sheet and previously submitted application regarding course codes.

I just found course code CS801 & CS871 not changed yet. Which I already studied courses during MS CS course work with same course codes. Even CS801 course is the compulsory course in the PhD CS course work then Course code miss-matching exists. In a same manner, Recently CS831 course code get changed to the course code CS880 in the terminal examination from initially enrolled course code CS831 during PhD CS joining report.

I am little bit worried about IIUI Course codes scheme for the PhD CS due to these conflicts. This will gives bad impact on my academia transcripts with repetition of the Course codes in a MS and then PhD CS.

This is my humble request to the IIUI administration to reconsider Course codes hierarchy. As it (Course Code) is Primary parameter for the Courses work in the relevant documentation across the globe.

Same way, this query is the hurdle for me to appear in a Terminal Examination and complete my work for these courses during 'Fall' semester. Similarly, I have data security concerns about completed course work during PhD CS 'Fall' semester.

Other way around is, I will drop/skip all these courses and should appear/complete courses in the coming semesters with different course codes in a PhD CS from MS CS courses work.

Further, I would like to review my BS and MS (Computer Sciences) exam papers including result cards from 1999 to 2004. In short, what's the official way around to compile above queries?

Kind Regards

mImran
